

Abnormal sound when running

Why do runners make a whooshing sound?

Don't dilly-dally. In most cases, heart murmurs in runners are of the "innocent" variety. The whooshing sound is blood flowing through a normal, healthy heart. What's more? They might indicate an improved cardiovascular function instead of a dangerous heart abnormality.

Why does my knee make a noise when running?

During activities like running, the knee joint is subjected to repetitive stress, which can sometimes result in discomfort and the production of knee noise. Three bones form the knee joint: the femur (thighbone), the tibia (shinbone), and the patella (kneecap). The patella rests in a groove of the femur known as the trochlea.

What causes abnormal heart sounds?

Heart conditions such as valvular diseases, congenital heart defects, cardiomyopathies, and heart murmurs can cause abnormal heart sounds. These conditions often result in structural or functional abnormalities that disrupt the normal heart rhythm and produce various abnormal sounds.

What is the most common abnormal heart sound?

The most common abnormal heart sound is a heart murmur. A murmur is a blowing, whooshing, or rasping sound that occurs during your heartbeat. There are two kinds of heart murmurs: An innocent murmur can occur in children and adults. It's caused by the sound of blood moving normally through the heart.

Why do athletes murmur a lot?

In athletes, most murmurs are called physiological, or "innocent" murmurs. They can be a sign of increased cardiovascular fitness rather than a harmful heart abnormality.

What does a heart murmur sound like?

When your doctor listens to your heart, a "lub-dub" sound can be heard when your heart valves close. But sometimes, a "whoosh" or "swish" sound also can be heard due to turbulent blood flow near your heart. That's a heart murmur. Do you need to be concerned? In athletes, most murmurs are called physiological, or "innocent" murmurs.
