

## Are there any requirements for the cold installation temperature of the rock drill

How deep should a rock drill be?

Air-track drills generally drill a 4 or 4 1/2 inch hole. Blasthole depths generally do not exceed 100 feet. The cuttings from rock drilling generally make good stemming material. Compressed air is used to flush these cuttings from the hole. Drilling is frequently the most expensive operation in a surface mine.

What are the safe job procedures for drill operation?

recommended safe job procedures for drill operation. It is designed for use in the training of drill operators and helpers. Where the drill crew is also involved in explosives transport should be used in conjunction with this module. excavators, drilling and blasting of the overburden is necessary. Highwall drills are used

How do you maintain a drill hole?

ground and remain a safe distance from edge of highwall. underneath operating machines, such as shovels, bucket wheels, or draglines. Never get under the swinging buckets of these machines. for proper operation. for the job. Keep platform free dry as possible. Keep oil and grease spills cleaned up. powder). Do not drill holes misfired hole.

Which drill crew should be used in conjunction with this module?

Where the drill crew is also involved in explosives transport should be used in conjunction with this module. excavators, drilling and blasting of the overburden is necessary. Highwall drills are used to drill a pattern of holes for blasting, in order to fragment the overburden. abrasion, scraping, and chipping.

How do you keep a drill rig safe?

Keep drill rig on solid ground and remain a safe distance from edge of highwall. underneath operating machines, such as shovels, bucket wheels, or draglines. Never get under the swinging buckets of these machines. for proper operation. for the job.

How high should a drill rig be?

When drill rig must be caution. The mast must not overhead power line. High up to 35 feet. trailing cables.

Environmental drilling performed during cold weather conditions and the colder months of the year have specific hazards and concerns associated.

Drill Cool provides unique solutions for controlling the temperature of drilling fluids for oil, gas and geothermal operations though out the world.

Protecting a hydraulic rock drill in cold weather requires a combination of pre - winter maintenance, proper storage, and careful operation. By following the tips outlined in this blog, ...
