

Electric air compressor refueling video tutorial

How to start an air compressor?

1 As with all power equipment, always wear safety glasses and closed toe shoes. 2 Make sure the air compressor is on a flat surface, and check the pump oil level before each use. 3 Next, connect the air hose to the regulator valve and the power tool to the hose. 4 Now you are ready to start the air compressor.

How do I connect my air compressor?

To be able to use your compressor, you'll then need to connect your air hose. Your compressor will have at least one hose connector or "coupler" for this purpose. This coupler is a small metal cylinder with a hole in the end. One end of your air hose will have a "male" plug that fits into this hole.

How do you use a compressor coupler?

As before, simply push the tool's plug into the coupler until it clicks, then pull on the tool to make sure it's seated properly. Whatever tool you use, make sure it's the appropriate size for your compressor's CFM (cubic feet per minute) output.

How do you connect a compressor to a hose?

Once your air hose is hooked up to the compressor, go ahead and attach your desired air tool to the other end of the hose, which will likely have a female quick-connect coupler. As before, simply push the tool's plug into the coupler until it clicks, then pull on the tool to make sure it's seated properly.

What should I do if my air compressor is not working?

Make sure the compressor's power switch is in the "OFF" position before plugging in the power cord. Also, make sure you plug it directly into a grounded 3-prong outlet. Avoid using power strips or extension cords with your air compressor, as these can throttle the power supply and cause damage to the pump motor.

How do you test a air compressor?

Set the PSI to 100 using the control valve and switch on your compressor. Let the air tank fill and make sure it shuts off when 100 PSI is reached. If this all happened, you are good to go and can start using your compressor to power air tools. Another quick tip is to test the safety valve.

This video will show you the proper startup, operation, and shut down procedure for an electric air compressor. 1 As with all power equipment, always wear safety glasses and closed toe shoes. ...
